

20FT BULK LIQUID STORAGE

SCF's 20ft Bulk Liquid Storage Tank is a versatile on site solution for both large and small projects, and anything in between. The small stackable footprint of the unit allows increased flexibility and ease of transport on both rail and road.

Details

SCF's 20ft Bulk Liquid Storage Tank is right at home on sites with space limitations, providing ample bulk liquid storage. Need something bigger? They can also be stacked and can be connected in a farm configuration to increase storage capacity without compromising footprint.

Our tanks are Skid-mounted for speedy, cost effective mobilisation, and their forklift pockets make on site movements a breeze.

Filling ratios can be easily and safely monitored while the units are in situ thanks to external level gauges that are fitted on all our liquid storage units.

Put it all together and you have a versatile 32,000L solution for on-site static liquid storage.

Key Features

- Inlet connections
- 4 inch bauer coupling with butterfly valve
- 4 inch camlock coupling with butterfly valve
- Forklift pockets
- Front and rear drain valves
- Toolbox for connection storage
- AS1657 compliant stair and gantry system

Options

- Internal mixing lines
- Galvanised steel
- Mounting points for agitators
- Various linings for acid applications

Specifications

20ft Bulk Liquid Storage | FR20S

Specifications may vary

External

Length (mm)	6,058
Width (mm)	2,438
Height (mm)	2,997

Weight

Tare (kg)	6,200
Payload (kg)	32,000
MGW (kg)	6,200
